

REMARKS

This amendment is offered in response to the Office Action of October 27, 2006 and the Examiner interview of April 26, 2007.

Applicant expresses appreciation to the Examiner for his participation in the interview. There, it was discussed that the recitation of an energy storing circuit, for storing the energy received from the power receiving circuit until sufficient energy is stored so to be transferred to the power charging circuit, electrically connected to said Power Receiving Circuit is not found in the cited and searched prior art. Accordingly, it was concluded that the recitation of such limitations in an independent claim would render that claim patentable. It was also discussed that claim 18 currently recites such limitations so that claim 18 currently contains enough limitations to render it patentable over the cited and searched prior art.

Applicant has amended independent claims 1 and 6 to contain the same limitations indicated above to render these claims patentable as well. Furthermore, Applicant has removed the recitation of "omnidirectional" from the claims to obviate issues related to such recitation. Applicant has also provided nonsubstantive amendments to the claims.

For all of the reasons above, it is respectfully submitted that all of the presently pending claims are allowable. A notice of allowance is respectfully requested.

Respectfully submitted,

T. David Bomzer
